Information Technologies UzSWLU

**Abstract**— This paper provides detailed information about the purpose and functions of the software iSpring Suite 10 and emphasizes its importance in English language learning process. In addition to this, it suggests several ways of incorporating iSpring Suite application into creating e-books and presentations.

**Keywords**— iSpring Suite, language learning, technology development, software, English language, audio-lingual method, grammar-translation method, structural approach, task-based language learning.

## 1. INTRODUCTION

The modern world cannot be seen without the technologies and network existing almost at every corner of the globe. The software “iSpring Suite” is a perfect example of technology development related to education and especially language learning. First of all, let’s identify what kind of software it is. According to the official site of iSpring applications, iSpring Suite, more precisely its tenth version, is a brand new platform for creating interactive courses integrated in Microsoft PowerPoint presentation maker. Though, iSpring Suite can be used as an independent application to create various elements for a more effective learning process. The feature that makes this version of iSpring different from its fellows is that there is a cloud storage named iSpring Space, where the courses of any sizes and of any difficulty can be stored with 100 percent guarantee of its confidentiality and long preservation. iSpring Suite offers its users multiple interactions: quizzes, interactions, simulations (even including dialogs), screencasts and flipbooks.

## 2. MAIN PART

All of the mentioned above can be created through incorporated sub-applications of iSpring Suite named iSpring Visuals, iSpring Quizmaker, iSpring TalkMaster and iSpring Cam Pro. Shortly speaking, this application is the perfect one for teachers who are keen on e-learning and e-learning development. iSpring Suite is considered to work well even with poor network conditions, offering all its resources offline. In a developing country like Uzbekistan, this kind of e-learning software is very useful and can be used for revolution in education. Implied on all spheres of education during these hard times of Covid-19 outbreak, this application has shown its importance in the learning process, most importantly English language learning process. English language learning requires constant interaction and dialectic approach in order to improve the comprehension of English language. The methods that can be reached through learning courses made on iSpring Suite include Audio-lingual method, Grammar-translation method, Structural approach and Task-based language learning methods. To start with, we have to identify each method and observe how iSpring Suite can be incorporated into them.

Audio-lingual method is a language teaching method in which teachers make active use of dialogues and empower the learner’s listening skills. iSpring TalkMaster can be used for learners to gain needed listening skills as it provides an access to create dialogues that can be recorded beforehand and used to interact with a learner. Furthermore, the teacher’s voice guide is also believed to be an important tool in teaching English language, especially for those whose listening skill has to be worked on. On the other hand, to check the knowledge of students, a teacher may use iSpring Quizmaker to create various interesting types of quizzes which not only will check the learner’s knowledge, but also will make the process of taking quizzes more exciting and stress-free. The Quizmaker includes Drag and Drop, Multiple and Single choice, Matching, Filling the blanks, Hotspots, Sequence, Short answer and many more. Each of them has its own unique features and checks different areas of student’s understanding and comprehension. Structural approach in teaching English language is an approach in which the teacher explains every rule following a particular structure. This structure is based on the learner’s understanding and overall level of the group that is taking the language class. When getting to know iSpring Suite, it is crucial to consider structural approach while making e-course or presentation with interactive elements. For instance, while making an electronic course about grammar, a teacher should explain the topic “to be” by adding some interactive elements to maintain and review newly accepted knowledge. Then, it would be appropriate to explain the topic related to English tenses, some of which require the basic knowledge of “to be”, or the topic that has to be explained previously. Moreover, the implementation of iSpring Suite to task-based language learning can be reached through different iSpring sub-applications. This may include watching the screen-captured video and following some rules to finish the task, or lead the dialogue with a fictional character to understand the communicative part of English language to reach the finish line, or simply do some quizzes in order to reach a set goal. iSpring Suite allows any teacher to make from zero a successful and effective eLearning course with the minimal time spent on it. Talking about conducting lectures during online

education, even there iSpring is very useful and easy to imply. With this application, the teacher will not only be able to conduct a lecture with flow and confidence, but also integrate some videos, images and infographics into the explaining process.

### 3. CONCLUSION

Each of the features mentioned above with their functions have already been implemented in the educational area and are proven to be effective in today's methodology. iSpring Suite 10 is truly a tool that makes teachers' works more comfortable and organised. It is something that we all as English language specialists, no, basically any language specialists have waited for the last decades. iSpring Suite is considered to be the hand of help to create unique training and learning development goals. Another benefit of this software that has not been mentioned yet is that iSpring Suite interactive elements can be used independently and separate from the online course they belong to. That's how effective this software is. Whatever your goal is and whatever course you want to make, iSpring Suite 10 is always at your fingertips to rule it in the right way and get right to the point you want.
