## INTRADACTION

Resolution of the President of the Republic of Uzbekistan dated September 29, 2018 "On measures to radically improve the system of preschool education", September 30, 2017 "On measures to radically improve the management of preschool education" The resolution "On the organization of the Ministry of Preschool Education of the Republic of Uzbekistan" was adopted.

They outline all aspects of the comprehensive development of the preschool education system, the upbringing of children in a healthy and harmonious way. In particular, the newly formed Ministry of Preschool Education will develop and implement state policy in this area, expand the state and non-state network of preschool education institutions and strengthen their material and technical base, provide them with qualified teaching staff. , sharply increase the coverage of children in preschool institutions, the comprehensive intellectual, spiritual, aesthetic, physical development of children through the introduction of modern educational programs and technologies in the educational process and radically improve the quality of their preparation for school 'year.

## Methodology

Preschool education is a type of educational institution in the Republic of Uzbekistan, which implements general preschool education programs in various areas. Preschools provide education, training, supervision, care and rehabilitation for children aged 2 to 7 years.

Preschool education is the primary part of lifelong learning. It ensures that the child develops into a healthy and developed person, stimulates the desire to learn and prepares him for systematic learning.

The purpose of pre-school education is to prepare children for school, to form a child as a healthy, developed, independent person, to reveal their abilities, to cultivate a passion for learning, systematic education.

In recent years, a new network of preschools is being formed. Examples include the Apartment Kindergarten and the Kindergarten-Primary School. Preschool education groups are being set up to teach children fine arts, music, language and computer literacy. Such actions serve the spiritual and moral education of preschool children in accordance with the requirements of the "National Training Program".

Modern evolving pedagogical technologies focus on the educational process, as well as the development of children's mental processes, their personal qualities, intellectual and creative potential, and the formation of physical development.

There is an intensive search for pedagogical technologies in preschool education institutions of the Republic of Uzbekistan, which assume the use of generally accepted methods in solving practical or intellectual problems, and the development and revival of existing traditional "Do as I do" technologies.

In general, the state requirements state that young children and preschoolers should be developed in five areas. By developing these five areas, the child will have 4 competencies and will be motivated to enter 1st grade.

Another important news is that the number of children in the groups should not exceed 25 people. An electronic EMIS system has also been set up to enforce this restriction. By 2021, this will be the number of children in all MTC groups in the country.

## Analysis and Conclusion.

At the initiative and tireless efforts of the President, the issue of educating a harmoniously developed "harmoniously developed generation" in our country has risen to the level of state policy.

Raising a harmoniously developed generation has always been one of the noblest and greatest dreams of mankind. In our country, from time immemorial, special attention has been paid to the education of young people, their education, their development into highly qualified individuals.

As in all spheres, today in our country the initiative of our esteemed President Sh.M.Mirziyoyev pays special attention to the field of preschool education. On September 30, 2017, "On the organization of the Ministry of Preschool Education of the Republic of Uzbekistan" Resolution No. 3305.

Ministry of Preschool Education of the Republic of Uzbekistan dated July 3, 2018 No 3032 "On approval of state requirements for the development of primary and preschool children of the Republic of Uzbekistan" for children in preschool

education today The educational process is carried out on the basis of the decision of the Ministry of Preschool Education of the Republic of Uzbekistan dated August 7, 2018 "First Step" state curriculum.

Preschool education is based on the state curriculum "First Step" in accordance with the requirements of each age. It is important to teach children to speak fluently, to teach them to read and write, to expand their thinking, to impart knowledge about existence. It is during this period that we can see the interest of children in the formation of creative thinking, in deciding which profession to pursue in the future. This, in turn, shows that the educational process with children in preschool education depends on the knowledge of educators who effectively organize the educational process.

Today, the ability of preschool educators to organize the proper use of new pedagogical technologies and ICT tools in the educational process should attract children's interest and attention to the educational process.

The planning of the educational process in preschool groups is based on the daily routine of the group, and the daily activities planned by the teacher, children's games, leisure and educational activities should be carried out alternately.

The educational process is carried out in accordance with the curriculum based on the age and individual development of the child in order to meet the educational and social needs.

The educational process is integrated into a single whole that arises in the life of the child and the environment around him.

Pre-school education groups in preschools help children develop a sense of faith, love for the motherland and self-awareness.

MTC educators must have sufficient pedagogical, technological knowledge and experience to accurately determine each child's readiness for school, while relying on the requirements of the MTM education program. If a child develops normally during the preschool period and has no strong influence on his or her physical and mental development, then the child will reach the level of education at the age of seven.

In pre-school groups, educators focus on the following issues:

1. Development of reading skills in students.
2. Forming the worldview of students.
3. Nurture mental maturity, spiritual beauty, physical maturity.
- Helping students to be polite, moral, and aesthetically pleasing.
5. Formation of oral and written speech in students.
6. Formation of feelings of devotion and love for parents and homeland.

The main focus of the preparatory group educator is to ensure that all children fully master the content provided for in the preschool curriculum, as this is a prerequisite for full preparation for school education. The pedagogical process in large groups, which stems from the task of preparing children for school, is unique. This uniqueness lies not only in the copying of the school's educational work, but also in the special organization of the activities and behaviors of the children, which are aimed at inculcating in them the qualities necessary for successful teaching in school.

#### **Discussion**

Preschool education is the primary part of lifelong learning. It ensures that the child develops into a healthy and developed person, stimulates the desire to learn and prepares for systematic learning. Preschool education for 6-7 year olds is provided in state and non-state children's preschools and in the family. The purpose of pre-school education is to prepare children for school, to form a child as a healthy, developed, independent person, to reveal their abilities, to cultivate a passion for learning, systematic education.

The protection of the life and health of children in the pre-school educational institution is carried out by the medical staff of the pre-school educational institution and the state, as well as by the medical staff of the health authorities attached to the pre-school educational institution.

#### **Conclusion**

Procedures and rules for the organization of protection of life and health of children in preschool education, rules for bringing and taking children to and from preschool education, requirements for the organization of security in the premises of preschool education, preschool education Requirements for the organization of fire safety in the institution, the requirements for the safety of the territory are regulated by the "Regulations on the organization of protection of life and health of children in preschool institutions."

Pre-school education ensures the formation of a healthy, well-rounded child, instills in him a desire to learn, prepares him for regular education, and provides state and non-state pre-school education until the child reaches the age of six or seven. and is carried out in families. Communities, public and charitable organizations, and international foundations are actively involved in organizing the activities of such educational institutions.
